This guide provides instructions on how to upgrade OnApp Cloud to the 6.4 version. You can update to OnApp 6.4 from OnApp 6.3 or 6.4 Edge 1. OnApp 6.4 is a new stable version that introduces a lot of new features, improvements, and fixes. Depending on the version that you have, refer to one of the following documentation sets.

**Upgrade from OnApp 6.3**
- Upgrade Control Panel Server

**Upgrade from OnApp 6.4 Edge 1**
- Upgrade Control Panel Server
1 What's New

The OnApp Cloud 6.4 Stable provides new features and improvements. You can find the list of all key enhancements at Release Notes.

1.1 VSS Network Management for vCenter

To use OnApp vCenter with vSphere Standard licensing, you may now import existing vSphere Standard Switches from vCenter to OnApp and use them instead of vSphere Distributed Switch, which requires Enterprise Plus licensing.

1.2 vCenter Resource Pools

Resource pools allow you to delegate control over resources of a host (or a cluster) so that you can use them to divide into sections all resources in a cluster.

1.3 vCenter Cluster as Compute Resource

Now you can create compute resources using clusters, imported with the vCenter server. To connect to vCenter, you can create a vCenter server logical point on the OnApp side and then, add each cluster from the vCenter side as a compute resource on the OnApp side separately. Accordingly, you can create your VS based on the compute resource (cluster) and resource pool that you select on the VS creation wizard.

1.4 TOTP Authentication

If you would like your users to utilize Google Authenticator or any similar application with their OnApp account to enhance security, you may now enable TOTP authentication for two-factor authentication (2FA). TOTP stands for Time-based One-time Password algorithm, a common form of Two-factor Authentication, which, offers increased security for 2FA.
1.5 Updated UI

In OnApp 6.4, we updated the user interface with the new look and feel for all UI components, including:

- 505 and 404 Error landing pages
- tree structure; the status icons and other service icons on the tables and table content
- the Buckets menu
- placeholders and inputted texts

1.6 User Role Creation

In OnApp 6.4, we improved the user role creation process by introducing the role templates. Now you can create a new role based on the default roles (Administrator or User), as well as clone a role and assign it to a new user.
2  Upgrade Notes

OnApp 6.4 is a new stable version that introduces a lot of new features, improvements, and fixes. You can update to OnApp 6.4 from OnApp 6.3 or 6.4 Edge 1. Before upgrading to OnApp 6.4, read these upgrade notes to get ready for the upgrade.

- To upgrade to 6.4, the MySQL version must be >= 5.6.4. For database migration instructions, refer to Migrate Control Panel Database to MariaDB 10.4.
- To test the upgrade, you may first simulate the upgrade process on the test environment. For the instructions, refer to the Configuring Control Panel Environment for Simulation Purposes page.

2.1 Control Panel Server

- Check the Activity Log on your OnApp CP dashboard if there are no transactions running on your cloud. Wait until all transactions are completed before proceeding to the upgrade.
- Make sure no Control Panel files are open for editing under the root user account.
- If you use an isolated license, you need to manually sync with the dashboard by downloading a validation request and then uploading a validation response after the Control Panel upgrade. For more information on how to do this, refer to the License guide.
- If you use custom languages on your CP, follow the procedure at How to import custom languages after an upgrade to import a custom locale after the update.
- If you plan to deploy Accelerator, refer to the RabbitMQ Configuration for Accelerator document for more details.

2.2 Static Compute Resources

- Be aware that OnApp does not support UEFI on static compute resources. You should disable UEFI on your compute resources before the upgrade.
- If you are running the OnApp version prior to 5.4 and consider an upgrade, note that starting from OnApp 5.4, it is allowed to attach only one network to a NIC, and different networks can be assigned to the same NICs if their VLANs are different. If you attach more than one network to the same NIC, all of them will be displayed in the interface, but only one will work.

2.3 CloudBoot Compute Resources

- If you use Integrated Storage, refer to Upgrade Integrated Storage and Upgrade Cloud with Integrated Storage Static Servers (from 6.3) for more information about the upgrade details.
- If you use the auto-healing functionality for Integrated Storage, make sure to disable it before the upgrade.
- Drives assigned for use by Integrated Storage are identified, using a disk signature that is generated by the SCSI page query mechanism to the device. Please note that disk signatures may change across different kernel versions following an upgrade and reboot. If this occurs, go to the compute resource edit page to re-identify and select the correct drives. Please contact support if you have any concerns regarding this operation.
3 Upgrade from 6.3 to 6.4

The guides in this section apply to upgrade to OnApp 6.4 from the 6.3 version.

3.1 Upgrade Guide for Control Panel Server (from 6.3)

- To upgrade to 6.4, the MySQL version must be >= 5.6.4. For database migration instructions, refer to Migrate Control Panel Database to MariaDB 10.4.
- You can update to OnApp 6.4 from OnApp 6.3 or 6.4 Edge 1.
- To test the upgrade, you may first simulate the upgrade process on the test environment. For the instructions, refer to the Configuring Control Panel Environment for Simulation Purposes page.

This guide provides an instruction on how to upgrade your Control Panel server from OnApp Cloud 6.3 to 6.4. Please follow the complete procedure of the upgrade process. All packages must belong to the same major version to ensure the best performance of your cloud.

3.1.1 Upgrade Control Panel Server

yes' when the installer prompts

- Installer output is redirected to ./onapp-cp-install.log
- All installer critical errors are in located at /var/log/messages

To upgrade your Control Panel server:

1. Download the OnApp YUM repository file

   ```bash
   # rpm -Uvh http://rpm.repo.onapp.com/repo/onapp-repo-6.4.noarch.rpm
   ```

2. Upgrade OnApp Control Panel installer package

   ```bash
   # yum update onapp-cp-install
   ```

3. Update your server OS components (if required)

   ```bash
   # /onapp/onapp-cp-install/onapp-cp-install.sh -y
   ```

4. (Optional) If you need some custom Control Panel configuration, set the values before the installer script runs

   The list of custom configuration options for Control Panel.
# vi /onapp/onapp-cp.conf

Usage:
```
OnApp Upgrade Guide

Database server options:

    Default database SQL server is MySQL Server.

Please use one of the following option to install LOCALLY:

    --mariadb         : MariaDB Server
    --mariadb-custom  : MariaDB Server (custom for CentOS 7.x only)
    --community       : MySQL Community Server
    --percona         : Percona Server
    --percona-cluster : Percona Cluster

    -m MYSQL_HOST   : MySQL host. Default is 'localhost'
    -m mysql-port=MYSQL_PORT    : TCP port where MySQL Server serves connections. Default values is 3306 for the local installation
    -m mysql-sock=[MYSQL_SOCK] : Unix socket on /var/lib/mysql/mysql.sock. Used if local server only. The socket is unset if the option's argument isn't specified.
    -p MYSQL_PASSWD : MySQL password. Random is generated if is not set or specified.
    -d MYSQL_DB     : OnApp MySQL database name. Default is 'onapp'
    -u MYSQL_USER   : MySQL user. Default is 'root'

Redis Server options:

    --redis-host=REDIS_HOST : IP address/FQDN where Redis Server runs. It is used by Control Panel to connect to Redis Server.
    --redis-bind=REDIS_BIND : The IP address for Redis Server to serve connections (to listen)
    --redis-sock=REDIS_SOCK : Unix socket on box's public IP address (listed in SNMP_TRAP_IPS) is specified.
    --redis-port=REDIS_PORT : Redis Server listen port. Defaults are: 0 - if local server
OnApp Upgrade Guide

server

Random password is generated if the option's argument isn't specified.
By default no password is used for local Redis.

--redis-sock[=REDIS_SOCK] : Path to the Redis Server's socket. Used if local server only.
Default is /var/run/redis/redis.sock
The socket is unset if the option's argument isn't specified.

Options to manage OnApp Control Panel administrator account:
Please note, that these options are for NEW INSTALL only and not for upgrade

-P ADMIN_PASSWD    : CP administrator password
-F ADMIN_FIRSTNAME : CP administrator first name
-L ADMIN_LASTNAME  : CP administrator last name
-E ADMIN_EMAIL     : CP administrator e-mail

RabbitMQ Server and vCloud options:

--rbthost RBT_HOST : IP address/FQDN where RabbitMQ Server runs.
The RabbitMQ will be installed and configured on the current box if localhost/127.0.0.1 or box's public IP address (enlisted in SNMP_TRAP_IPS)
Default values is 127.0.0.1.

VCD_* : Options are useful if vCloud/RabbitMQ are already installed and configured.

--vcdlogin VCD_LOGIN : RabbitMQ/vCloud user.
Default value is 'rbtvcd'.
--vcdpasswd VCD_PASSWD : RabbitMQ/vCloud user password. The random password is generated if isn't specified.
--vcdvhost VCD_VHOST : RabbitMQ/vCloud vhost.
Default value is '/'

RBT_* : Options are used to configure RabbitMQ manager account. If local RabbitMQ server.

--rbtlogin RBT_LOGIN : RabbitMQ manager login. The default value is 'rbtmgr'.
--rbtpasswd RBT_PASSWD : RabbitMQ manager password. The random password is generated if isn't specified.

General options:

--ha-install : Proceed with Control Panel and Hight Availability components installation
RHEL/CentOS 7.x is supported only!

--rake RAKE_TASKS : List of OnApp Control Panel rake tasks (separated with space) to run at the very end of install or upgrade
-v ONAPP_VERSION : Install custom OnApp CP

com a for snmp to trap

-1 SNMP_TRAP_IPS : IP addresses separated with coma

- y : Update OS packages (except of OnApp provided) on the box with 'yum update'.

-a : Do not be interactive. Process with automatic installation.

Please note, this will continue OnApp Control Panel install/upgrade even there is transaction currently running.

-t : Add to the database and download Base Templates. For new installs only.

--noservices : Do not start OnApp services: monit, onapp and httpd

Please note, crond and all OnApp's cron tasks remain running. They could be disabled by stopping crond service manually for your own risk.

-D : Do not make database dump, and make sure it is disabled in the cron and not running at the moment

-w : Do not disable iptables service. Is applicable on fresh installs only.

This will skip update and configure for services, like: system packages, MySQL database, Redis Server, RabbitMQ Server, Monit service

Set the SERVICE parameter (space separated list of statements) to define services, which update is needed.

Possible reserved statements are:

packages' upgrade;

database upgrade and configuring;

Server upgrade and configuring;

RabbitMQ Server upgrade and configuring;

upgrade and configuring.

--accept-eula : Automatically accept OnApp's End User License Agreement (DEPRECATED)

-c CONFIG_FILE : Custom installer configuration file. Otherwise, preinstalled one is used.

-h : print this info

**MYSQL_***

Options are useful if MySQL is already installed and configured.

- **-m MYSQL_HOST**
  MySQL host. Default is 'localhost'

- **--mysql-port=MYSQL_PORT**
  TCP port where MySQL Server serves connections. Default value is 3306 for the local installation.

- **--mysql-sock=[MYSQL_SOCK]**
  Unix socket on which MySQL Server serves connections. Default value is /var/lib/mysql/mysql.sock. Used if local server only. The socket is unset if the option's argument isn't specified.

- **-p MYSQL_PASSWD**
  MySQL password. Random is generated if not set or specified.

- **-d MYSQL_DB**
  OnApp MySQL database name. Default is 'onapp'

- **-u MYSQL_USER**
  MySQL user. Default is 'root'

**REDIS_***

Options are useful if Redis Server is already installed and configured.

- **--redis-host=REDIS_HOST**
  IP address/FQDN where Redis Server runs. It is used by Control Panel to connect to Redis Server. The Redis Server will be installed and configured on the current box if localhost/127.0.0.1 or box's public IP address (listed in SNMP_TRAP_IPS) is specified. Default value is 127.0.0.1. If local Redis, it will serve as well on the unix socket 'PORT' (if --redis-sock without argument isn't specified).

- **--redis-bind=[REDIS_BIND]**
  The IP address for Redis Server to serve connections (to listen). The option isn't mandatory.

- **--redis-port=REDIS_PORT**
  Redis Server listen port. Defaults are:
  0 - if local server
  6379 - if remote server

- **--redis-passwd=[REDIS_PASSWD]**
  Redis Server password to authenticate. Random password is generated if the option's argument isn't specified. By default no password is used for local Redis.

- **--redis-sock=[REDIS_SOCK]**
  Path to the Redis Server's socket. Used if local server only. Default is /var/run/redis/redis.sock. The socket is unset if the option's argument isn't specified.

4 Upgrade from 6.4 Edge 1

The guides in this section apply to upgrade to OnApp 6.4 from the 6.4 Edge 1 version.

4.1 Upgrade Guide for Control Panel Server (from 6.4 Edge 1)

- To upgrade to 6.4, the MySQL version must be \( \geq 5.6.4 \). For database migration instructions, refer to Migrate Control Panel Database to MariaDB 10.4.
- You can update to OnApp 6.4 from OnApp 6.3 or OnApp 6.4 Edge 1.
- To test the upgrade, you may first simulate the upgrade process on the test environment. For the instructions, refer to the Configuring Control Panel Environment for Simulation Purposes page.

This guide provides an instruction how to upgrade your Control Panel server from OnApp Cloud 6.4 Edge 1 to 6.4. Please follow the complete procedure of the upgrade process. All packages must belong to the same major version to ensure the best performance of your cloud.

5. **Run the Control Panel installer:**

```
# /onapp/onapp-cp-install/onapp-cp-install.sh --quick-update
```

Please, answer ‘yes’ when the installer prompts to initiate images, templates, and ISOs download.

**The full list of installer options for Control Panel.**

**Usage:**

```bash
# onapp/onapp-cp-install/onapp-cp-install.sh [options]
```

Database server options:

install LOCALLY:

- mariadb             : MariaDB Server
- mariadb-custom      : MariaDB Server (custom for CentOS 7.x only)
- community           : MySQL Community Server
- percona             : Percona Server
- percona-cluster     : Percona Cluster
- mysql-host=MYSQL_HOST : MySQL host. Default is 'localhost'
- mysql-port=MYSQL_PORT : TCP port where MySQL Server serves connections. Default values is 3306 for the local installation
- mysql-sock=MYSQL.SOCK : Unix socket on which MySQL Server serves connections. Default values is /var/lib/mysql/mysql.sock. Used if local server only

If the option's argument isn't specified.
- p MYSQL_PASSWORD : MySQL password. Random is generated if is not set or specified.
- d MYSQL_DB       : OnApp MySQL database name.

Default is 'onapp'

- u MYSQL_USER     : MySQL user. Default is 'root'

Redis Server options:

- redis-host=REDIS_HOST : IP address/FQDN where Redis Server runs. It is used by Control Panel to connect to Redis Server. The Redis Server will be installed and configured on the current box if localhost/127.0.0.1 or box's public IP address (listed in SNMP_TRAP_IPS) is specified. Default value is 127.0.0.1.

If local Redis, it will serve as well on the unix socket 'PORT' (if --redis-sock without argument isn't specified)

- redis-bind=REDIS_BIND : The IP address for Redis Server to serve connections (to listen) The option isn’t mandatory.

- redis-port=REDIS_PORT : Redis Server listen port.

Defaults are:

0 - if local server
OnApp Upgrade Guide

server

password to authentificate. Random password is generated if the option's argument isn't specified. By default no password is used for local Redis.
-redis-sock[=REDIS_SOCK] : Path to the Redis Server's socket. Used if local server only.
/var/run/redis/redis.sock
if the option's argument isn't specified.

Options to manage OnApp Control Panel administrator account:
Please note, that these options are for NEW INSTALL only and not for upgrade

-P ADMIN_PASSWD : CP administrator password
-F ADMIN_FIRSTNAME : CP administrator first name
-L ADMIN_LASTNAME : CP administrator last name
-E ADMIN_EMAIL : CP administrator e-mail

RabbitMQ Server and vCloud options:
--rbthost  RBT_HOST : IP address/FQDN where RabbitMQ Server runs.
The RabbitMQ will be installed and configured on the current box if localhost/127.0.0.1 or box's public IP address (enlisted in SNMP_TRAP_IPS)
Default values is 127.0.0.1.

VCD_* : Options are useful if vCloud/RabbitMQ are already installed and configured.

--vcdlogin  VCD_LOGIN : RabbitMQ/vCloud user.
Default value is 'rbtvcd'.
--vcdpasswd VCD_PASSWD : RabbitMQ/vCloud user password. The random password is generated if isn't specified.
--vcdvhost  VCD_VHOST : RabbitMQ/vCloud vhost.
Default value is '/'

RBT_* : Options are used to configure RabbitMQ manager account. If local RabbitMQ server.

--rbtlogin  RBT_LOGIN : RabbitMQ manager login. The default value is 'rbtmgr'.
--rbtpasswd RBT_PASSWD : RabbitMQ manager password. The random password is generated if isn't specified.

General options:
--ha-install : Proceed with Control Panel and High Availability components installation
RHEL/CentOS 7.x is supported only!

--rake RAKE_TASKS : List of OnApp Control Panel rake tasks (separated with space) to run at the very end of install or upgrade
-v ONAPP_VERSION: Install custom OnApp CP version
-1 SNMP_TRAP_IPS: IP addresses separated with coma for snmp to trap
-y: Update OS packages (except of OnApp provided) on the box with 'yum update'.
-a: Do not be interactive. Process with automatic installation.
Please note, this will continue OnApp Control Panel install/upgrade even there is transaction currently running.
-t: Add to the database and download Base Templates. For new installs only.
--noservices: Do not start OnApp services: monit, onapp and httpd
Please note, cron and all OnApp's cron tasks remain running. They could be disabled by stopping crond service manually for your own risk.
-D: Do not make database dump, and make sure it is disabled in the cron and not running at the moment
-w: Do not disable iptables service.
Is applicable on fresh installs only.
--quick|--quick-update[-SERVICE]: Proceed with quick update procedure.
This will skip update and configure for services, like: system packages, MySQL database, Redis Server, RabbitMQ Server, Monit service
Set the SERVICE parameter (space separated list of statements) to define services, which update is needed.
Possible reserved statements are:
rpms - for 'system packages' upgrade;
database upgrade ond configuring;
Server upgrade and configuring;
RabbitMQ Server upgrade and configuring;
upgrade and configuring.
--accept-eula: Automatically accept OnApp's End User License Agreement
(DEPRICATED)
-c CONFIG_FILE: Custom installer configuration file. Otherwise, preinstalled one is used.
-h: print this info

5  Getting Support for Upgrade

You can use the instructions in this guide to upgrade your OnApp Cloud. If you have a full OnApp Cloud license, you can receive free upgrade support from the OnApp Support team. If you prefer to have the Support team perform the upgrade for you, submit a request to schedule the upgrade.

You can also refer to the following sources when you need help:

5.1 Professional Services

Get in touch with our Professional Services to get expert help from launch to production and beyond.

5.2 OnApp Community

Visit OnApp Community that is a public forum where you can share your feedback and product ideas. Only OnApp customers can give suggestions but anyone can explore them.

5.3 Knowledge Base

Visit Knowledge Base where you can find a lot of how-to articles to resolve questions that you may face while working with OnApp.

5.4 Documentation

You are now located in one of the OnApp documentation spaces that is Upgrade Guide. Go to Documentation Home to browse other available spaces.
