

Change Firewall Rule Position

Ensure that the following permissions are enabled before setting firewall rules for your virtual server:

- Create own firewall rules
- Destroy own firewall rules
- Read own firewall rules
- Update own firewall rules
- Update own virtual server
- Read own virtual server

```
GET /virtual_machines/:virtual_machine_id/firewall_rules/:firewall_rule_id/move.xml
GET /virtual_machines/:virtual_machine_id/firewall_rules/:firewall_rule_id/move.json
```

XML Request example

```
curl -X GET -u user:userpass http://onapp.test/virtual_machines/:virtual_machine_id/firewall_rules/:
firewall_rule_id/move.xml?position=down -H 'Accept: application/xml' -H 'Content-type: application/xml'
```

JSON Request example:

```
curl -X GET -u user:userpass http://onapp.test/virtual_machines/:virtual_machine_id/firewall_rules/:
firewall_rule_id/move.json?position=up -H 'Accept: application/json' -H 'Content-type: application/json'
```

To change a firewall rule position, specify the following parameters:

virtual_machine_id - ID of a virtual server the firewall rule belongs to

firewall_rule_id - ID of the firewall rule

position - specify the position change: up or down
